

eLearning Courses

ICE Training is expanding its portfolio of eLearning courses, to create training interventions that meet the optimised split between classroom and online delivery modes.

Why choose eLearning?

- eLearning is increasingly expected as the norm by learners
- Easy access to high standard of learning materials that are peer revised and delivered by our specialist tutors
- eLearning can be any time, any place learning experience so better suited to the international market
- Bite-size format allows for chunking of knowledge which can be priced affordably

Benefits of eLearning

- **International dimension**
eLearning enables internationally based learners the opportunity to receive high quality training from industry leaders without having to travel to the UK.
- **Quality assured**
Our eLearning courses have been developed using the same rigorous processes as our classroom based courses. You can be assured that you will receive training that is of the same standard as you would receive if you attended a classroom course.
- **All eLearning courses are SCORM compliant.**
- **CPD and certificates**
Successful completion of eLearning courses results in the award of a digital certificate. This certificate can be imported into your CPD portfolio.

Pathways

The eLearning learning pathways can be developed as below, however, there is also the opportunity to link them with the NEC eLearning at a later date.

Your Professional Review and the Project Management suite are directly aligned with the career progress of civil engineers both laterally and vertically.

How to book?

w icetraining.org.uk
 t +44 (0)20 7665 2457
 e info@icetraining.org.uk

You also have an option to choose an annual license to the modules of your choice across your company, contact us and quote 'enterprise' for further information.

90%

of our training customers would recommend ICE Training courses to others.

ICE members get an exclusive discount.
